## Safety, every way you look at it, automatically.

Gone are the days when children could feel safe when in transit from home, school and back home. India's surge to advance is steadily backed by its rapidly exploding population, not to mention its equally growing crime rate. Now imagine your innocent little one lost, trying to find his/her way through huge masses of people. Nightmare? This has been a growing concern for schools and for parents alike. Somebody had to step in and do something about it. So we did!

We at SkoolSmart designed an automated attendance tracking system for schools and parents, to keep track of the whereabouts of children while in transit in the bus to and from the school. Our technology also helps keep track of children who don't commute by school buses. This innovative system was already a hit with schools and parents, even as they only heard the idea. The concept is a boon for teachers as they take blame for even a minor scratch on a child.

However, teachers and parents can feel at ease, now that SkoolSmart is here. Our technology sends out SMS alerts to parents of the bus pick-up time, bus boarding/alighting time and location, the kid's arrival in school and the kid's departure from school to home. This is a feature that parents would highly appreciate. Thankfully, technology never existed in their times.

## What's more? Lots more safety!

Why teachers and parents will soon swear by us? Our services include effective attendance monitoring and management in real time; generating customized standard reports; class/grade wise attendance summary; mandatory daily, monthly and yearly attendance report; important announcements to parents about special events; and easy attendance monitoring for parents through regular SMS alerts. Here's a host of features for the safety of the child, frantic parents and the ever thoughtful teacher.

### Camera Option

Schools can have a camera fitted onto the bus and our solution clicks the pictures of the bus in transit with children on board periodically and sends the snaps to the school/centralized server for the school administration to view periodically. Now rest assured when it comes to the whereabouts and safety of your child in every moment.

### On Board Video Recording Option

Schools can opt for a Video Recording on board. With our advanced Wi-Fi integrated recording cameras, the recording can automatically get downloaded to the server at school the moment the bus reaches the already Wi-Fi enabled school campus. It's that simple! This enables administration to post reviews of on-board behaviours of people and any incident! Nothing makes schooling a safer experience than this.

## Words that aptly describe our technology

**Automatic** - No swiping of cards. The ID card gets automatically scanned with the help of our powerful technology

**Flexible** - The range is adjustable to identify students

**Capable** - Identifying multiple tags together simply

**Un-Replicate-able** - The tags cannot be duplicated without authorized passwords

**Simple** - Easy installation and maintenance of the solution

**Irreplaceable** - This one's not a description, it's what our clients believe we are
